## Indication modules

## LED indication modules with collective contact

, Indicator modules in panel mounting housing with $8,16,24,32,40$ or 48 signal inputs
, Available in 6 color variants, LED colors can be modified by the customer using exchangeable light pipes
, Low power consumption (less than 1 W )
, Wide range power supply and signal inputs ( $24 \mathrm{~V}-230 \mathrm{~V}$ AC/DC)
, Integrated lamp test button and connection option for external button
, Easy configuration via DIP switch (NO / NC version, collective signal formation, inversion of collective signal)
, Operation indication via OK LED
, Labeling strips can be inserted in transparent window

## Device description

The LAB signaling modules are compact indication units in a panel mounting housing with $8,16,24,32,40$ or 48 signaling inputs. The units have an internal lamp test button and the connection for an additional external button.

DIP switches are located under the front panel of the unit to configure the following functions:

- Group-wise (groups of 8) switching between normally open and normally closed principle of the inputs
- Group-wise (groups of 8) inclusion in the collective alarm
- Inverting the collective alarm

If the input of a group is operated in the normally open principle, this means that a high signal leads to the lighting of the corresponding LED and the triggering of the collective alarm relay if the input group is included in the collective alarm formation.

If an input is operated in the normally closed principle, this means that a low signal leads to the lighting of the corresponding LED and the triggering of the collective alarm relay when the input group is included in the collective alarm.

The contact of the collective alarm is designed as a changeover contact in order to be able to react to different requirements of the application. In addition, the function of the relay can be inverted.

## Colors of the LED displays

The high luminosity of the displays is achieved by high-intensity white LEDs. The 6 colors green, red, yellow, blue, white and orange are created by prefixed light pipes. When ordering, the display colors can be specified in groups ( 8 channels each). By simply exchanging the light pipes, which are available as spare parts, the colors can also be adapted very easily to individual requirements at a later date. The light pipes can be purchased in strips of 8 pieces each. The exchange is done without tools as follows:

## Warning!

The front panel may only be removed in a de-energized state.

## 1. Removal of the front frame

2. Remove the front panel and carefully push out the light pipes from and through the front panel that are not needed, preferably at several
 points in a row, to the rear.
3. Press the light pipes of the desired color into the front panel from behind. front plate. The light pipes are always supplied in groups of 8 of one color. By simply bending them, they can also be easily separated and and pressed in individually.
4. The front panel and front frame must then be reassembled.

## Labeling

The individual labeling of the indicators is carried out by means of labeling strips, which are slid under the cover foil after removing the front frame. For this purpose, we can provide you with templates in MS Word format, which allow two-line labeling.

## Technical Data

## Operation voltage $\mathbf{U}_{\text {Sup }}$

| DC voltage | $24-230 \mathrm{~V}$ DC $(-15 \% /+20 \%)$ |
| :--- | :--- |
| AC voltage <br> Bridging time during <br> power failure | $24-230 \mathrm{~V} \mathrm{AC} 50 / 60 \mathrm{~Hz}(-15 \% /+10 \%)$ |
|  | $\mathrm{U}_{\text {Sup }}<110 \mathrm{~V}$ at least 10 ms res. 0,5 periods |
|  | $\mathrm{U}_{\text {Sup }}>110 \mathrm{~V}$ at least 100 ms res.. 5 periods |

## Alarm inputs

Response delay $<100 \mathrm{~ms}$

| Nominal voltage [V AC/DC] | Switching threshold for alarm*$[\mathrm{V}]+/-20 \%$ |  |  |  | Maximum permissible voltage [V AC/DC] | Input resistance [k $\Omega$ ] |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | On |  | Off |  |  |  |
|  | DC | AC | DC | AC |  |  |
| 24-230 | 16,5 | 14 | 13 | 13 | 253 | 150 (+/-20\%) |

* The switching thresholds refer to use at room temperature.

三ㅡ Different voltages can be supplied on request.

## Power consumption

| Number of <br> channels | Power consumption $[\mathrm{mW}](+/-20 \%)$ |  |
| :---: | :---: | :---: |
|  | Minimum | Maximum |
| 8 | 60 | 270 |
| 16 | 60 | 370 |
| 24 | 60 | 455 |
| 32 | 60 | 540 |
| 40 | 65 | 625 |
| 48 | 65 | 710 |

## Relay contact

| Load capacity | $4 \mathrm{~A} @ 0 \ldots 250 \mathrm{~V}$ AC and $0 \ldots 24 \mathrm{~V}$ DC |
| :---: | :---: |
|  | 1 A @ 60 V DC |
|  | 0,3 A @ 110 V DC |
|  | 0,1 A @ 250 V DC |
| AC voltage resistance between relay contacts and signal voltage | 3 KV eff 50 Hz 1 min |
| AC voltage resistance of the opened relay contacts | 1 KV eff 50 Hz 1 min |

## External lamp test

| Switching threshold direct current | $18 \mathrm{~V}+/-20 \%$ |
| :--- | :--- |
| Switching threshold alternating current | $13 \mathrm{~V}+/-20 \%$ |
| Input resistance | $150 \mathrm{k} \Omega(+/-20 \%)$ |

## Mechanical data

| Number of channels | Front frame <br> $\mathrm{H} \times \mathrm{W} \times \mathrm{D}[\mathrm{mm}]$ | Panel breakout [mm] | Depth with front frame <br> and terminals [mm] | Weight <br> $[\mathrm{g}]$ |
| :---: | :---: | :---: | :---: | :---: |
| 08 | $96 \times 96 \times 8$ | $92 \times 92$ | 100 | 195 |
| 16 | $96 \times 96 \times 8$ | $92 \times 92$ | 100 | 197 |
| 24 | $96 \times 192 \times 8$ | $92 \times 186$ | 100 | 400 |
| 32 | $96 \times 287 \times 8$ | $92 \times 282$ | 100 | 405 |
| 40 |  |  | 550 |  |
| 48 |  |  | 555 |  |

| Mounting | Panel mounting |
| :--- | :--- |
| Required mounting depth <br> Minimum horizontal distance <br> of two devices | 120 mm |
| Connection terminals | 15 mm |
| Wire cross section rigid or flexible | pluggable |
| without ferrules | $0,2 \ldots 2,5 \mathrm{~mm}^{2}$ |
| with ferrules | $0,25 \ldots 2,5 \mathrm{~mm}^{2}$ |

Environmental conditions

| Ambient operating temperature | $-20^{\circ} \mathrm{C} \ldots .+60^{\circ} \mathrm{C}$ |
| :--- | :--- |
| Storage temperature | $-40^{\circ} \mathrm{C} \ldots .+70^{\circ} \mathrm{C}$ |
| Duty cycle | $100 \%$ |
| Protection class front side | IP 54 |
| Protection class rear side | IP 20 |
| Humidity | Annual average maximum $75 \%$ relative humidity; on 56 days up to $93 \%$ |
|  | relative humidity; |
|  | Condensation not permitted during operation |
|  | [Examination: $40^{\circ} \mathrm{C}, 93 \% \mathrm{rH}>4$ days] |

## Norms

| Interference immunity for industrial areas | DIN EN IEC 61000-6-2 |
| :--- | :--- |
| Emitted interference for industrial areas | DIN EN 61000-6-4 |
| Industrial, scientific and |  |
| Medical equipment - |  |
| Radio disturbance characteristics - <br> Limits and methods <br> of measurement (Class A) |  |
|  | DIN EN 55011 |

The specifications for AC voltage are given as effective values and refer to a sinusoidal AC voltage with a frequency of $50 / 60 \mathrm{~Hz}$. All data refer to an ambient temperature of $25^{\circ} \mathrm{C}$.

## Terminal assignments

* The alarm inputs 9-16 are not assigned for the LAB08.

If the signal inputs are operated in normally closed mode, unused inputs must be connected to + or L .

## DIP-Switch

After taking off the front frame and removing the front panel, DIP switches become visible. In the following figure, a LAB with 48 alarms is shown as a representative of all devices.

| Q | $\otimes$ | Q | $\otimes$ | $\otimes$ | $\otimes$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ |  |
| $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ |  |
| $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | 8 |
| $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | " |
| $\otimes$ | Q | $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ | S3 |
| $\otimes$ | Q | $\otimes$ | $\otimes$ | $\otimes$ | Q |  |
| $\otimes$ | Q | $\otimes$ | $\otimes$ | $\otimes$ | $\otimes$ |  |

Depending on the number of channels of the indication module, there are different numbers of DIP switches and they have the functions described in the tables below.

## LAB 08 and LAB 16
